

Vertically Merged Cells (Invisible Row Separators)

The first column visually merges three rows because the inner row dividers are drawn in the page background colour. A reader sees one merged cell containing three lines of text; the PDF data, however, still encodes three separate rows split by white-on-white lines. A colour-aware parser must honour the visual reading.

Region	Q1	Q2	Q3
Pacific	100	110	120
Northwest	200	210	220
Division	300	310	320
Marketing	400	410	420
